

Troubleshooting!

Our service include:

- * **Technical training of mould prep. workers**
- * **Consultancy in maintenance requirements for blademoolds:**
 - Increase the life-period of moulds / cost-benefit analysis!
 - Implementation of log-reports (condition of mould)
- * **Consultancy in windblade mould-building:**
- * **New improved working methods:**
 - Methods for a quicker and more reliable, consistence application (despite differences in skills, workers, environment etc).
- * **Consulting in new tools for improved production processes.**
 - New technical tools for cleaning and application.
- * **Analysis of surface mistakes – what to be aware of?**
 - What causes e.g. pre-release and delamination? How can we prevent this, and save time in finish?
- * **Consultancy in working environment:**
 - How does the temperature, humidity and high or low airpressure influence the demoulding process.
 - How can we adjust treatments from Summer to Winter? When? And what signs should we look for!
- * **Interactive training videos!**
 - We produce interactive training materials such as videos/DVD's of application methods in windblade moulds along with relevant documentation! Customized in own production environment! - Helps training of new employees with different language, cultures, skills etc.
