

# smirdex

750  
ceramic net

- SMIRDEX net delivers better productivity and profitability since clogging is minimized, offering thus the possibility of higher performance and better surface finishing.
- The net fabric structure permits the maximum absorption of sanded particles thus providing dust-free sanding and cleaner surfaces. This means a healthier work environment, where less time and effort is needed for cleaning up whilst the worker is protected from the dangerous sanding dust.
- Thanks to the ceramic grains that it contains, Smirdex net is ideal for tougher and more demanding applications such as hard wood and other solid surface materials. It also offers an excellent performance and lifespan on primer sanding.
