

## White cotton cloth for application of release coats in molds

Granudan recommends always to use white cotton cloths when applying our release coats - simply to avoid colored pigments interfering in the release coat. At Granudan we supply white cotton cloths with a mix of garments and bed fabrics.

A very economic and workable solution for the use of manual application of release agents.

Remember to use small rags for application for minimizing the consumption of slipcoats, and bigger rags for wiping off the wet surface after application. Bigger cloths enable the worker to turn the cloth more often and thereby continuously use dry areas for an optimal wiping off process.

The white maco rags can easially be cutted in different sizes.

When changing from product to product e.g. from cleaner to sealer or from sealer to release agent, please ensure to use **ONLY** new, clean rags to avoid mix of products in the already used cloths.

– Used cloths should be disposed / thrown away!

**Granudan offers bags of 10 kg.**

**Price per kg. EUR 4,70 ex. vat. / DKK 35,00 ex. Vat**
